After publication of our paper,<sup>1</sup> we realized that the expressions for the dRPA-II and RPax-II correlation energies,

shown in equations (2) and (4) of the paper,<sup>1</sup> should take the following forms (previously published in Ref. [2]):

$$E_c^{\text{dRPA-II}} = \frac{1}{2} \int_0^1 d\alpha \operatorname{tr} \left[ \frac{1}{2} \mathbf{Q}_\alpha^{\text{dRPA}} (\mathbf{A}_1^{\text{II}} + \mathbf{B}_1^{\text{II}}) + \frac{1}{2} (\mathbf{Q}_\alpha^{\text{dRPA}})^{-1} (\mathbf{A}_1^{\text{II}} - \mathbf{B}_1^{\text{II}}) - \mathbf{A}_1^{\text{II}} \right], \quad (1)$$

and:

$$E_c^{\text{RPax-II}} = \frac{1}{4} \int_0^1 d\alpha \operatorname{tr} \left[ \frac{1}{2} \mathbf{Q}_\alpha^{\text{RPax}} (\mathbf{A}_1^{\text{II}} + \mathbf{B}_1^{\text{II}}) + \frac{1}{2} (\mathbf{Q}_\alpha^{\text{RPax}})^{-1} (\mathbf{A}_1^{\text{II}} - \mathbf{B}_1^{\text{II}}) - \mathbf{A}_1^{\text{II}} \right], \quad (2)$$

where the matrix  $\mathbf{Q}_\alpha$  is defined as follow:

$$\mathbf{Q}_\alpha = (\mathbf{A}_\alpha - \mathbf{B}_\alpha)^{1/2} (\mathbf{M}_\alpha)^{-1/2} (\mathbf{A}_\alpha - \mathbf{B}_\alpha)^{1/2} \quad (3)$$

with matrices  $\mathbf{A}_\alpha^{\text{I}}$  and  $\mathbf{B}_\alpha^{\text{I}}$  used to construct  $\mathbf{Q}_\alpha^{\text{dRPA}}$  and matrices  $\mathbf{A}_\alpha^{\text{II}}$  and  $\mathbf{B}_\alpha^{\text{II}}$  used to construct  $\mathbf{Q}_\alpha^{\text{RPax}}$ . Note that the matrices  $\mathbf{A}_\alpha^{\text{I}}$ ,  $\mathbf{A}_\alpha^{\text{II}}$ ,  $\mathbf{B}_\alpha^{\text{I}}$ ,  $\mathbf{B}_\alpha^{\text{II}}$  as well as  $\mathbf{M}_\alpha$  are defined in our paper<sup>1</sup> but that, on the other hand, the matrix  $\mathbf{A}_1^{\text{II}}$  appearing in Eqs. () and (1) of this erratum needs to be defined here:

$$(\mathbf{A}_\alpha^{\text{II}})_{ia,jb} = \alpha \langle ib || a j \rangle. \quad (4)$$

It differs from  $\mathbf{A}_\alpha^{\text{II}}$  in that it does not contain the differences of spin-orbital energies.

All results shown in the original paper were obtained using equations () and (1) of this erratum and are thus correct.

Note that the matrices  $\mathbf{Q}_\alpha$  are related to the matrices  $\mathbf{P}_{c,\alpha}$  that appear in our paper<sup>1</sup> by  $\mathbf{P}_{c,\alpha} = \mathbf{Q}_\alpha - \mathbf{I}$  (where  $\mathbf{I}$  is the identity matrix) and that one can make the following approxi-

and

$$(\mathbf{Q}_\alpha^{\text{RPax}})^{-1} = (\mathbf{I} + \mathbf{P}_{c,\alpha}^{\text{RPax}})^{-1} \approx \mathbf{I} - \mathbf{P}_{c,\alpha}^{\text{RPax}} = 2 \mathbf{I} - \mathbf{Q}_\alpha^{\text{RPax}}, \quad (6)$$

which lead to the so-called “IIa” approximations to the dRPA-II and RPax-II correlation energies:

$$E_c^{\text{dRPA-IIa}} = \frac{1}{2} \int_0^1 d\alpha \operatorname{tr} [\mathbf{B}_1^{\text{II}} \mathbf{P}_{c,\alpha}^{\text{dRPA}}], \quad (7)$$

$$E_c^{\text{RPax-IIa}} = \frac{1}{4} \int_0^1 d\alpha \operatorname{tr} [\mathbf{B}_1^{\text{II}} \mathbf{P}_{c,\alpha}^{\text{RPax}}]. \quad (8)$$

These are the expressions that were erroneously shown in the original paper.

mations to the matrices  $(\mathbf{Q}_\alpha)^{-1}$ , as explained in Ref. [2]:

$$(\mathbf{Q}_\alpha^{\text{dRPA}})^{-1} = (\mathbf{I} + \mathbf{P}_{c,\alpha}^{\text{dRPA}})^{-1} \approx \mathbf{I} - \mathbf{P}_{c,\alpha}^{\text{dRPA}} = 2 \mathbf{I} - \mathbf{Q}_\alpha^{\text{dRPA}}, \quad (5)$$
